

What held the Tunisian reform elite together

The 12 schools, mosques, newspapers and societies that appear in at least 3 of the 38 biographies, and the 27 subjects who passed through them. Node size is degree; the number after each institution is how many of the 38 it ties. Posts and published works are excluded, because an office is held in turn rather than shared. A separate pair of nodes, unconnected to this component, is not drawn.

● Subject of an essay (27 of 38)
■ Institution tying ≥3 subjects (12)

Source: Sadok Zmerli, *A'lām Tunisiyun* (Dar al-Gharb al-Islami, 2000), 38 biographical essays, author's extraction. 866 of 873 ties come from a model pass over the Arabic text and every one quotes its page verbatim. On a seeded sample of 206 ties, precision 0.907 (95% CI 0.860-0.940) and recall 0.672 (0.550-0.774), so counts here are lower bounds: the coders were further instances of the model that wrote the assertions, which makes the comparisons between layers meaningful and the headline number not. See docs/LIMITATIONS-aalam-tunisiyun.md.
