

Marriage alliances among Tunisian elite families

A node is a family, an edge one or more marriages between two of them. The thirty widest-married houses are named; the corona is the 955 families that married into the field exactly once.

marriages into other families

Source: rodovid.org genealogies, filtered to Tunisian families by tools/build_rodovid_elites.py, collapsed to families by tools/build_family_alliances.py. Surnames are rodovid's own reduction of the name, so patronymic nodes (Ali, Mahmoud, Youssef) aggregate unrelated people. The export is truncated at 65,535 rows: every count here is a floor. 1853 families, 3642 alliances; 27 named.
