

The core of the alliance network

The 5-core: strip every family with fewer than five allies inside, repeat until none is left to strip. The 6-core is empty, so this is as deep as the network goes.

marriages inside the core

Source: rodovid.org genealogies, filtered to Tunisian families by tools/build_rodovid_elites.py, collapsed to families by tools/build_family_alliances.py. Surnames are rodovid's own reduction of the name, so patronymic nodes (Ali, Mahmoud, Youssef) aggregate unrelated people. The export is truncated at 65,535 rows: every count here is a floor. 236 families, 1048 alliances; 220 named.
