

Forest Plot: Gender Promotion Velocity Gap Across Regimes

Adjusted delay in months for female promotion vs. male colleagues ($\Delta\text{Months} \pm 95\% \text{ CI}$)

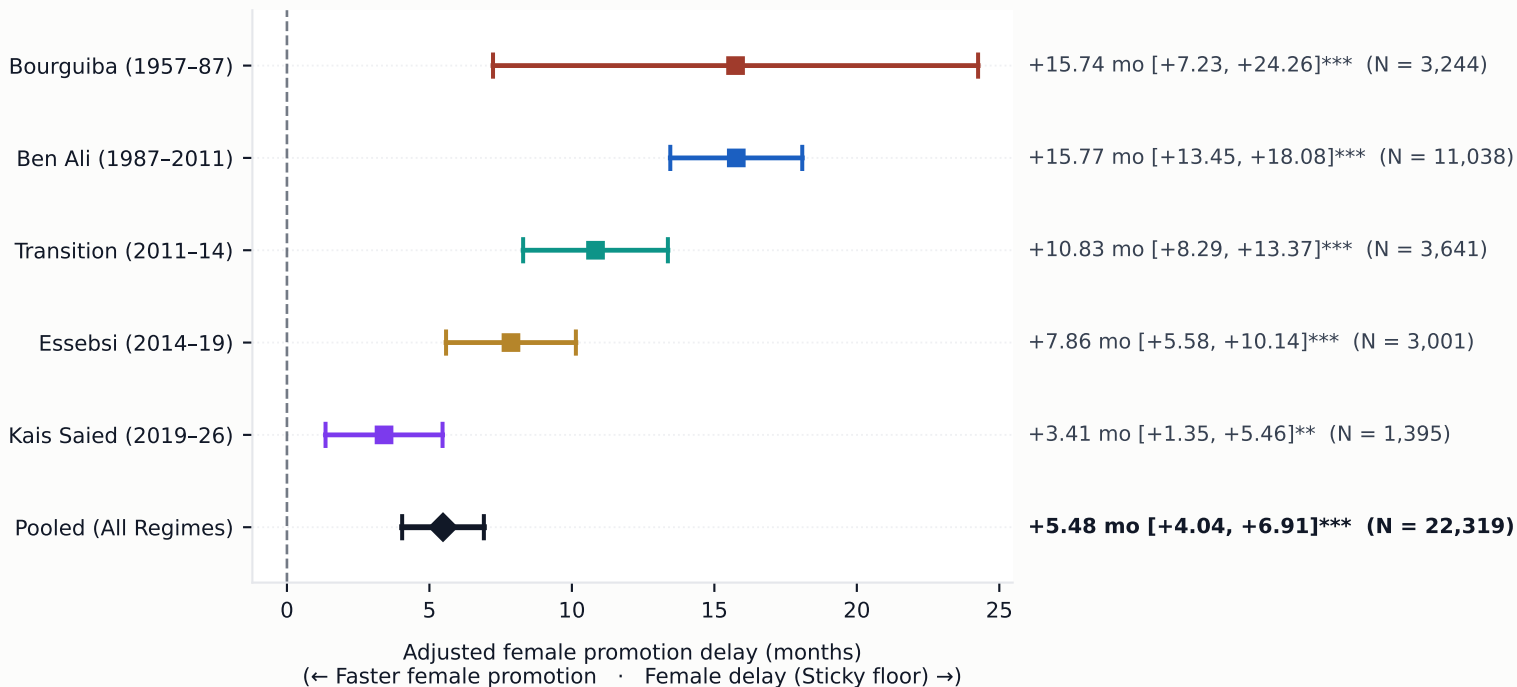

Figure 14a: Forest plot of female promotion velocity penalties (sticky floor) across Tunisian political regimes.

Notes: Points and horizontal error bars display estimated net delay in months for female civil servants to achieve upward promotion relative to male peers, controlling for baseline entering rank score (HC1 robust 95% CIs). The vertical dashed line at 0 indicates gender parity in promotion speed; positive values denote female promotion delay. Total sample N = 22,319 promotions.
