

Forest Plot: Coercive & Territorial Quarantine Odds Across Regimes

Odds Ratio (OR) of female appointment in Interior, Defense, or Regional Governance (OR $\pm$ 95% CI)

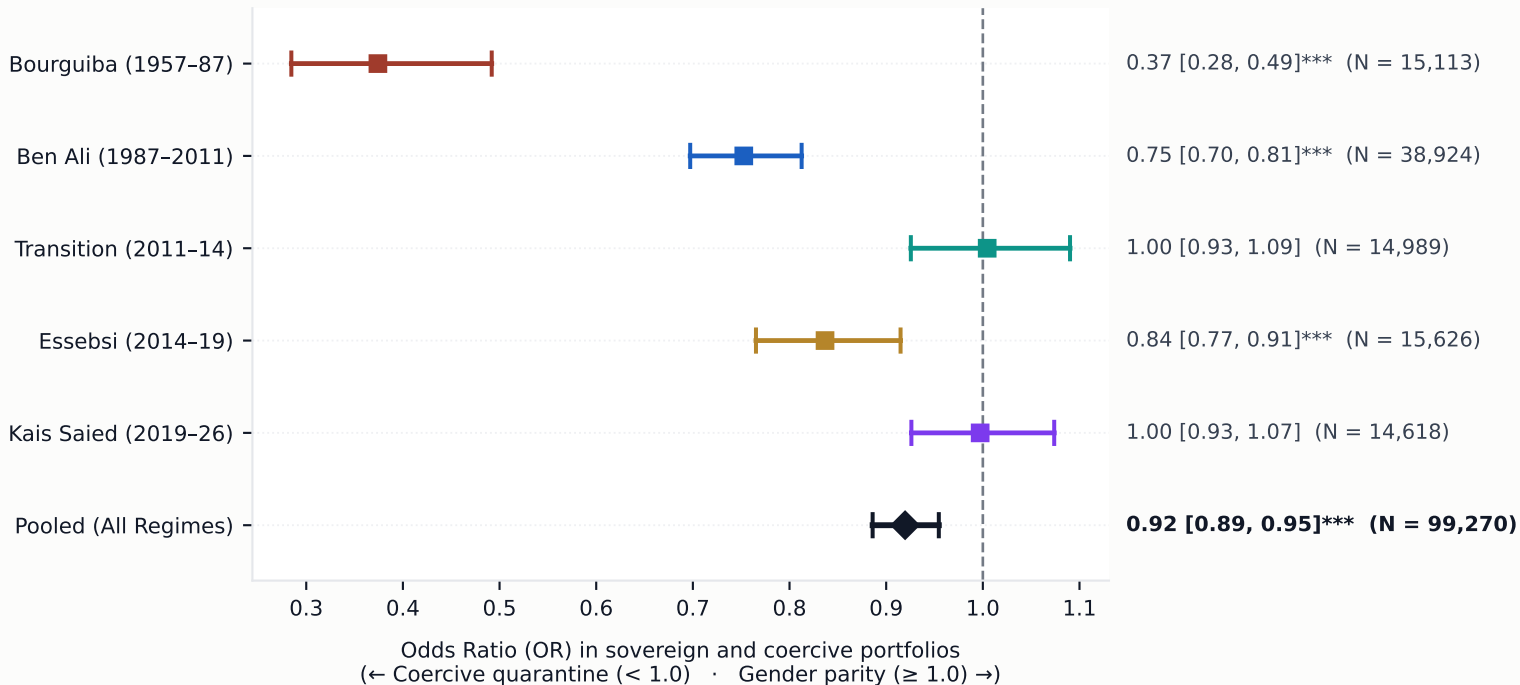

Figure 14c: Forest plot of female placement odds in sovereign and coercive portfolios across political regimes.

Notes: Odds ratios reflect the relative likelihood of female civil servants being assigned to sovereign coercive portfolios (Interior, Defense, Regional Governorships) vs. civilian line ministries, relative to male peers (95% CIs). The dashed reference line at 1.0 indicates gender parity in portfolio assignment; values < 1.0 show coercive quarantine of women. Total N = 99,270.
