

Forest Plot: Female Incumbent Survival Advantage Across Regimes

Adjusted difference in 24-month survival rate for women vs. men (Δ Percentage Points $\pm$ 95% CI)

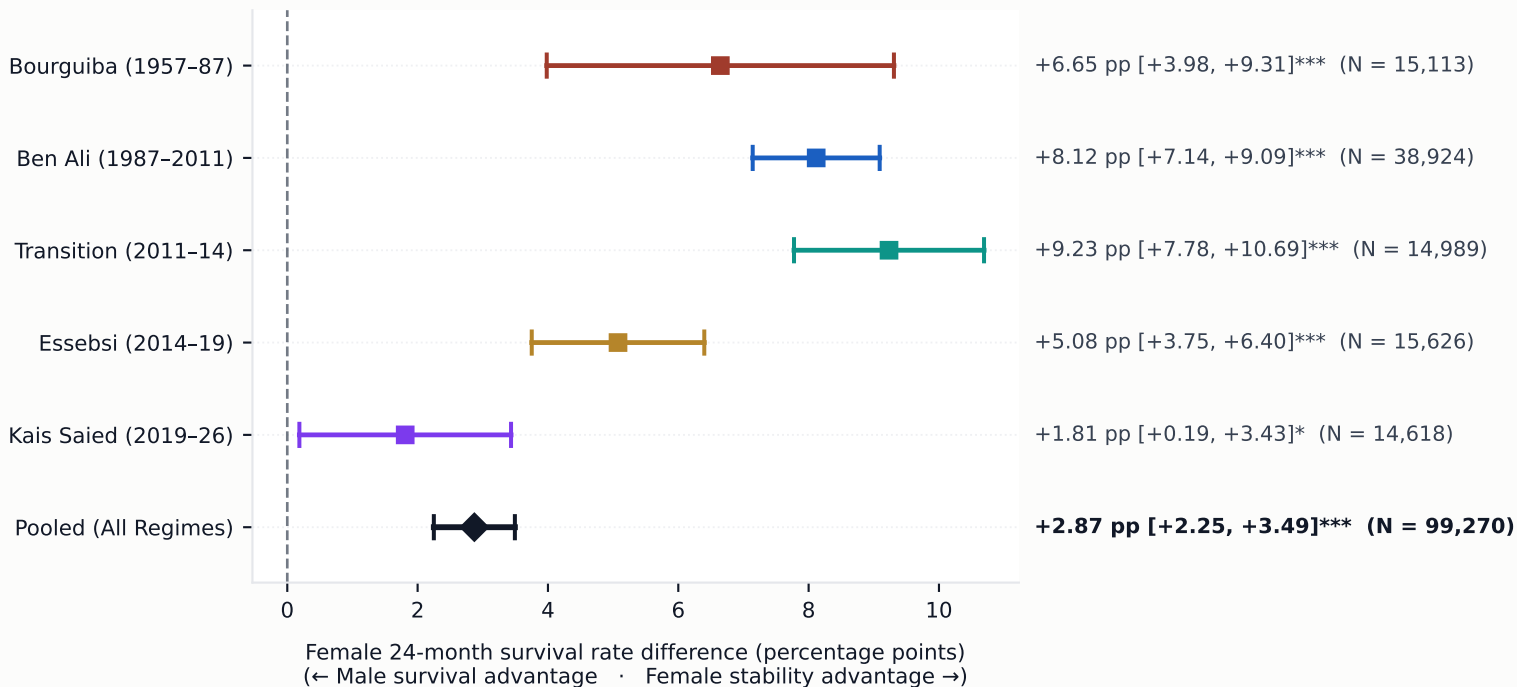

Figure 14d: Forest plot of the female 24-month tenure survival advantage across political regimes.

Notes: Points and horizontal error bars display the adjusted percentage-point difference in 24-month survival rates for female civil servants relative to male colleagues, holding hierarchical rank constant (HC1 robust 95% CIs). The dashed reference line at 0 pp denotes equal survival hazard; positive values reflect higher female tenure stability. Total sample N = 99,270 spells.
