

The ruptures pull the security apparatus in opposite directions

Everyone holding a post in the interior ministry, the governorates or defence on the eve of a rupture who took a further post within five years, by where that post sat. Municipalities are outside this body, so a governor moving to a town hall counts as leaving it. Retention runs 37%, 44%, 47% against 44%, 46%, 39% in each era's ordinary times: 1987 -8, 2011 -2, 2021 +9 points. 1987 and 2021 move it in opposite directions and both clear a 95% interval; 2011 does not move it at all. That is unlike the interior apparatus, where all three ruptures raise retention, and unlike it again in the baseline — the interior's ordinary-times retention climbs across the three eras, 52% to 56% to 66%, where this falls back in the 2020s.
