

Empirical Tests of Gender Bias in the Tunisian State Apparatus (1957-2026)

Multi-Method Evaluation of Promotion Velocity, Patronage Exclusion, Network Silos, and Coercive Quarantines

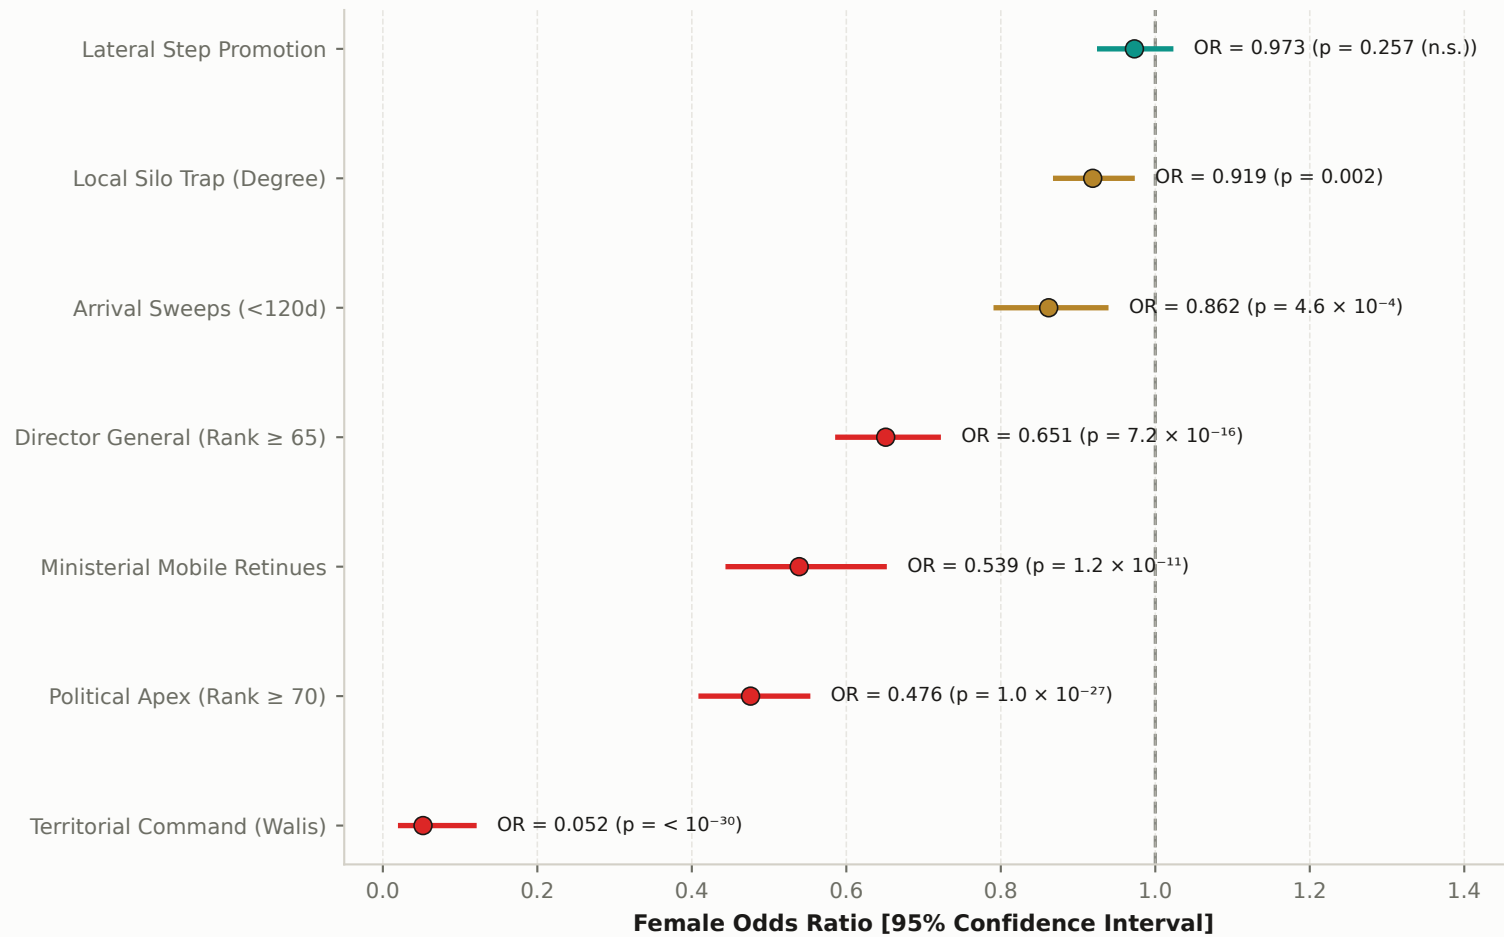

A. The 'Sticky Floor' Promotion Velocity Bias

Women wait +12.1 months longer for promotion overall (+6.4 to +8.9 mo at Director/DG levels)

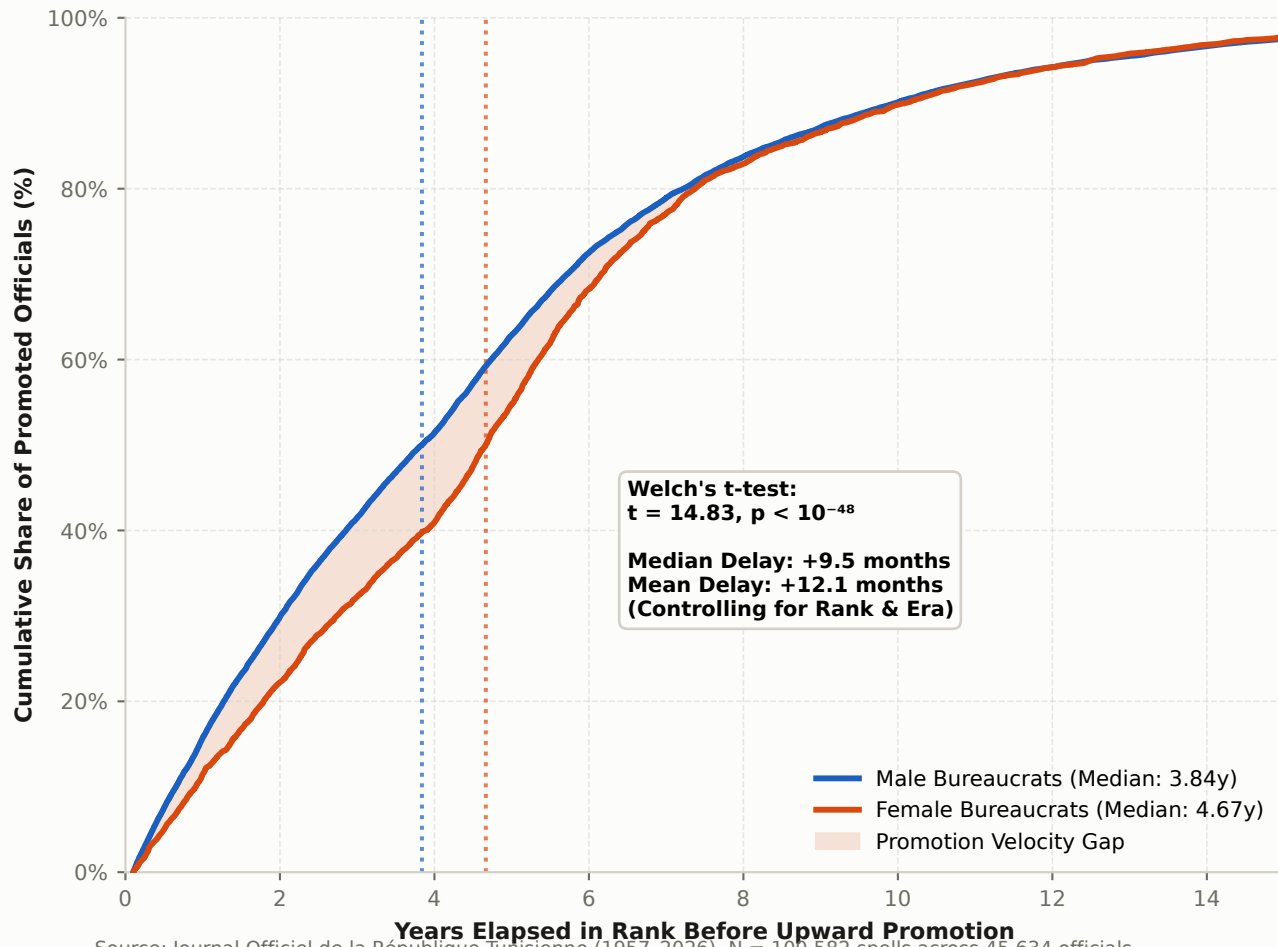

B. Empirical Tests of Institutional Gender Penalties (Odds Ratios)

Severe discounts in territorial command (0.05), cabinets (0.48), retinues (0.54), and DGs (0.65)

C. Cumulative Distribution of Promotion Velocity (ECDF)

Statistically significant rightward shift: female promotion curves lag systematically across all cohorts

D. Sovereign Exclusion & Institutional Stratification

Hermetic exclusion from territorial command (1.5%) and personal retinues (14.3%)
