

1987 Ben Ali Coup d'État: Appointment Throughput

Discontinuity at cutoff: $\hat{\tau} = +0.74$ (SE = 1.24)

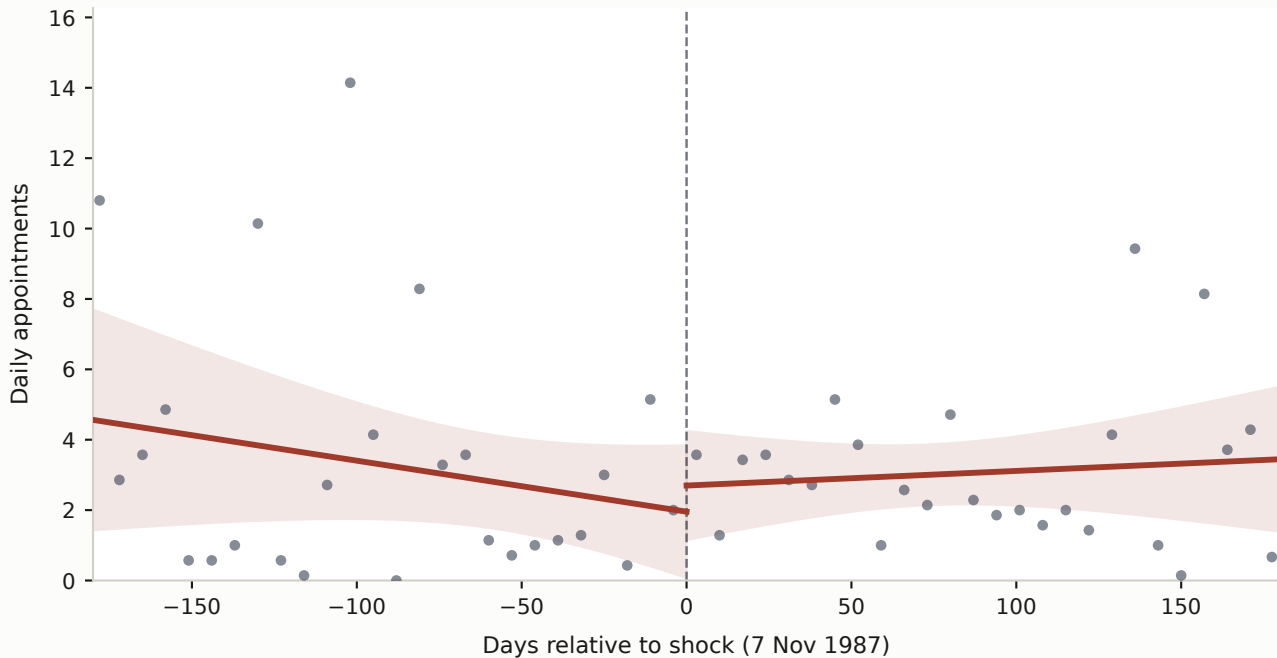

Figure 13a: Daily appointment volume around the 1987 shock (Ben Ali Coup d'État).

Notes: Dots depict 7-day binned sample averages. Solid lines show local linear fit ($p = 1$, $h = \pm 180$ days, uniform kernel) with 95% HC1 confidence intervals. Cutoff $c = 0$ (7 Nov 1987): $\hat{\tau} = +0.74$ (n.s.) acts/day (SE = 1.24, $p = 0.5488$). Daily $N = 361$.
