

Difference-in-Differences: Weaponized Demotion Probability

Excess demotion within 36 months vs. 5-year pre-shock moving cohorts

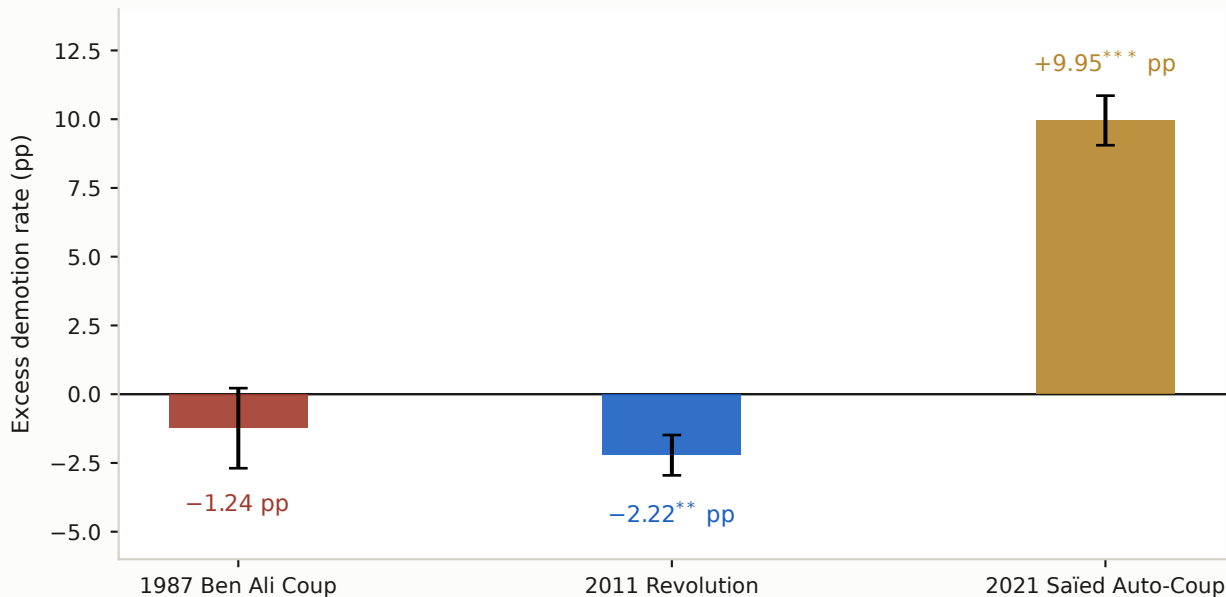

Figure 13g: Difference-in-Differences estimates of weaponized downward mobility (demotions).

Notes: Linear probability model of demotion within 36 months of shock among surviving movers vs. 5-year pre-shock moving cohorts.

Excess demotion rates: 1987 (-1.24 pp, n.s., SE = 1.34); 2011 (-2.22** pp, SE = 0.73, p = 0.0024);

2021 (+9.95*** pp, SE = 0.90, p < 0.0001). Total sample N = 43,944 movers.
