

Vertical Mobility and the Hierarchical Glass Ceiling in the Tunisian State Apparatus (1957 -2026)

Tracking N = 100,582 career spells across 45,634 officials through 70 years of administrative gazette records (JORT)

A. The Hierarchical Glass Ceiling Gradient Across Regimes

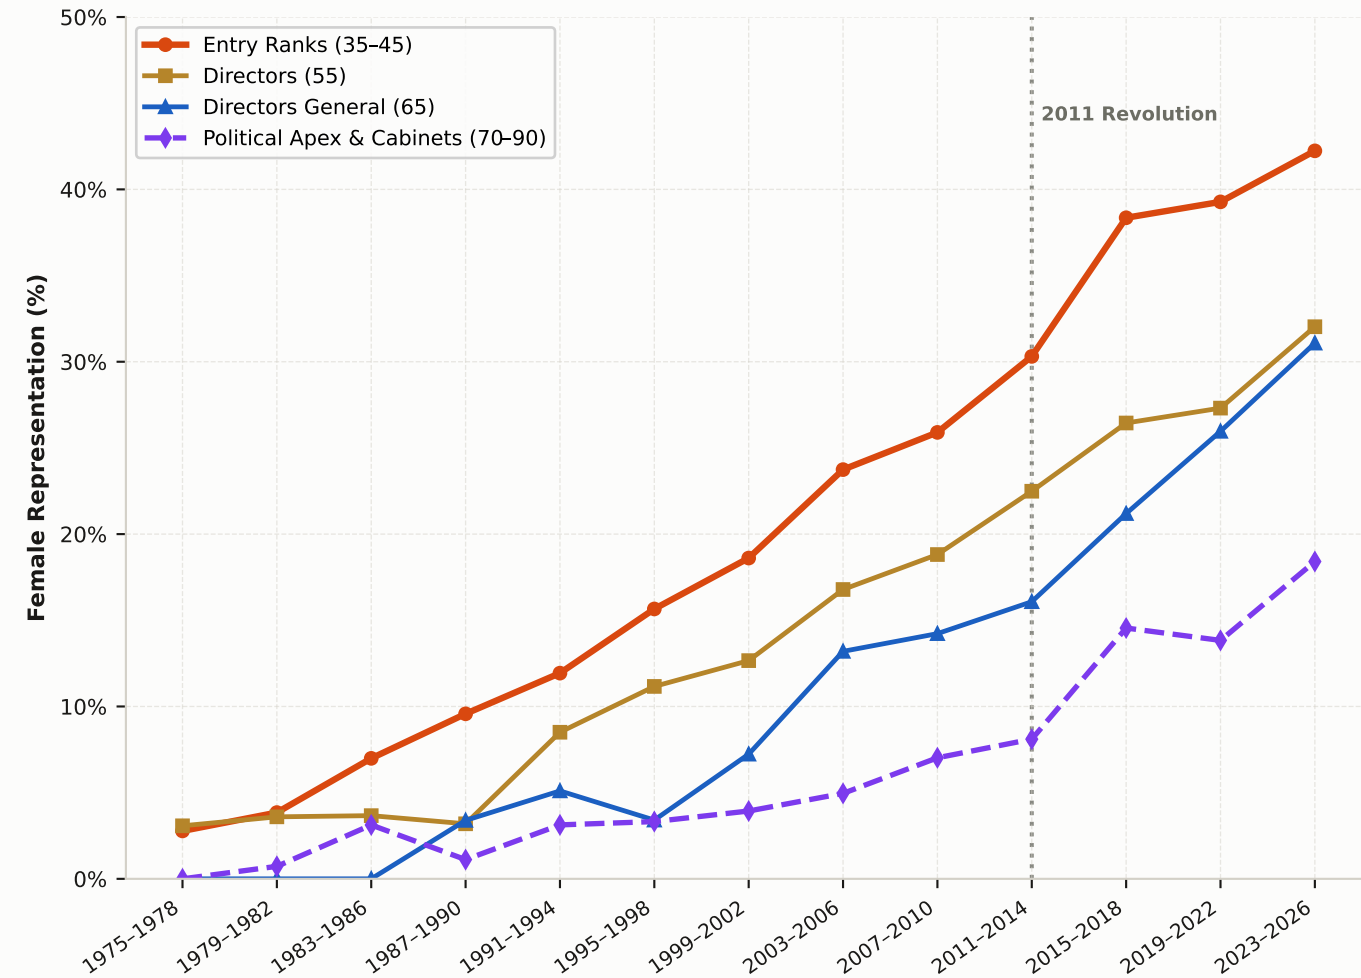

Entry parity rises to 43% under Saïed, but plunges at Director-General and Apex ranks

50% Numerical Parity Line

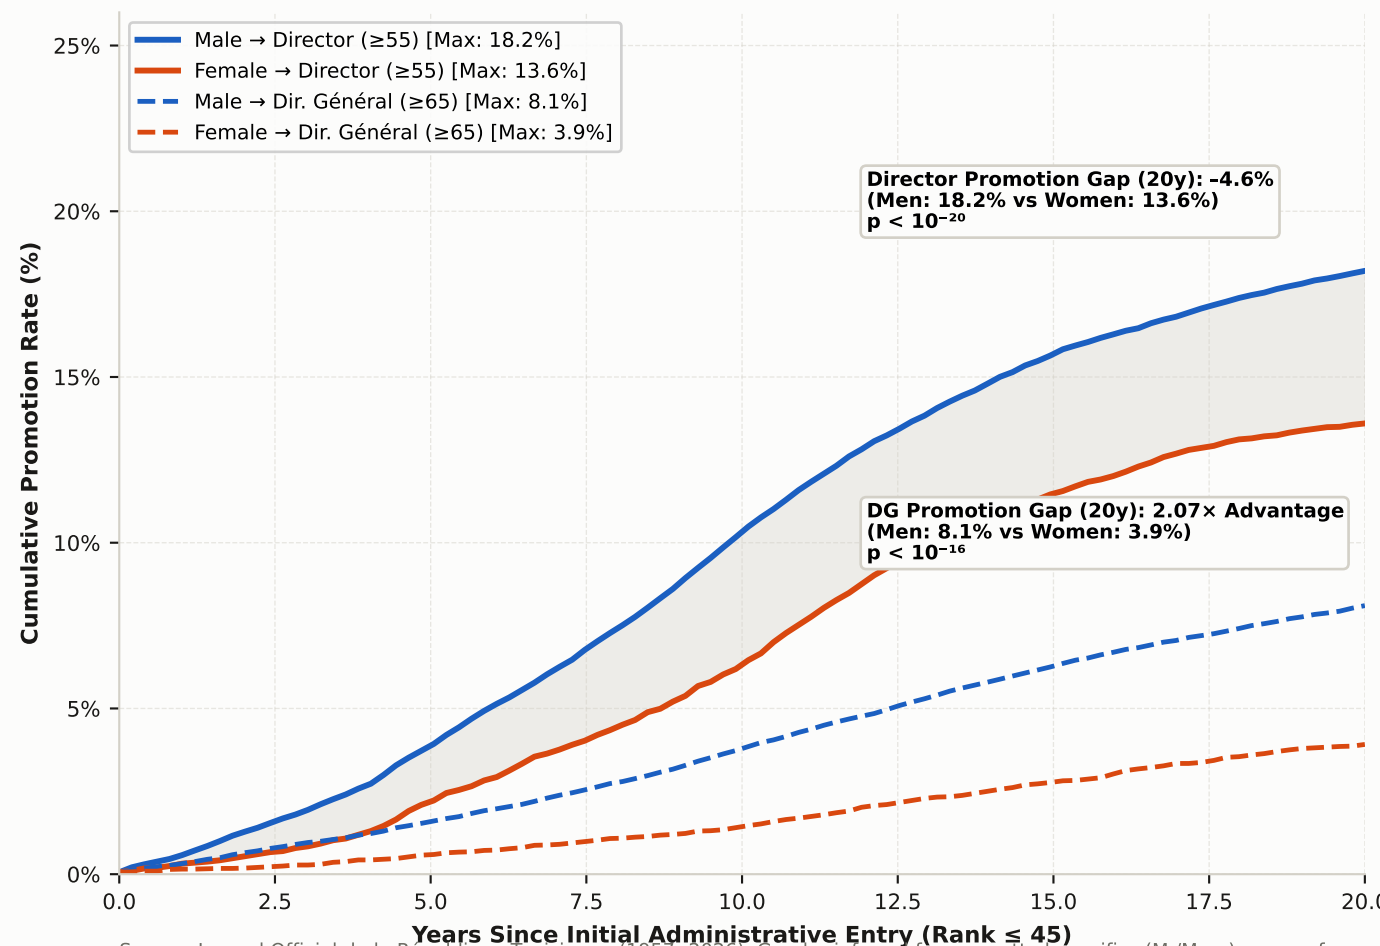

B. The 'Scissor Effect': Divergence Between Entry and Executive Apex (1975-2026)

Rapid feminization of lower administrative rungs fails to close the apex gap

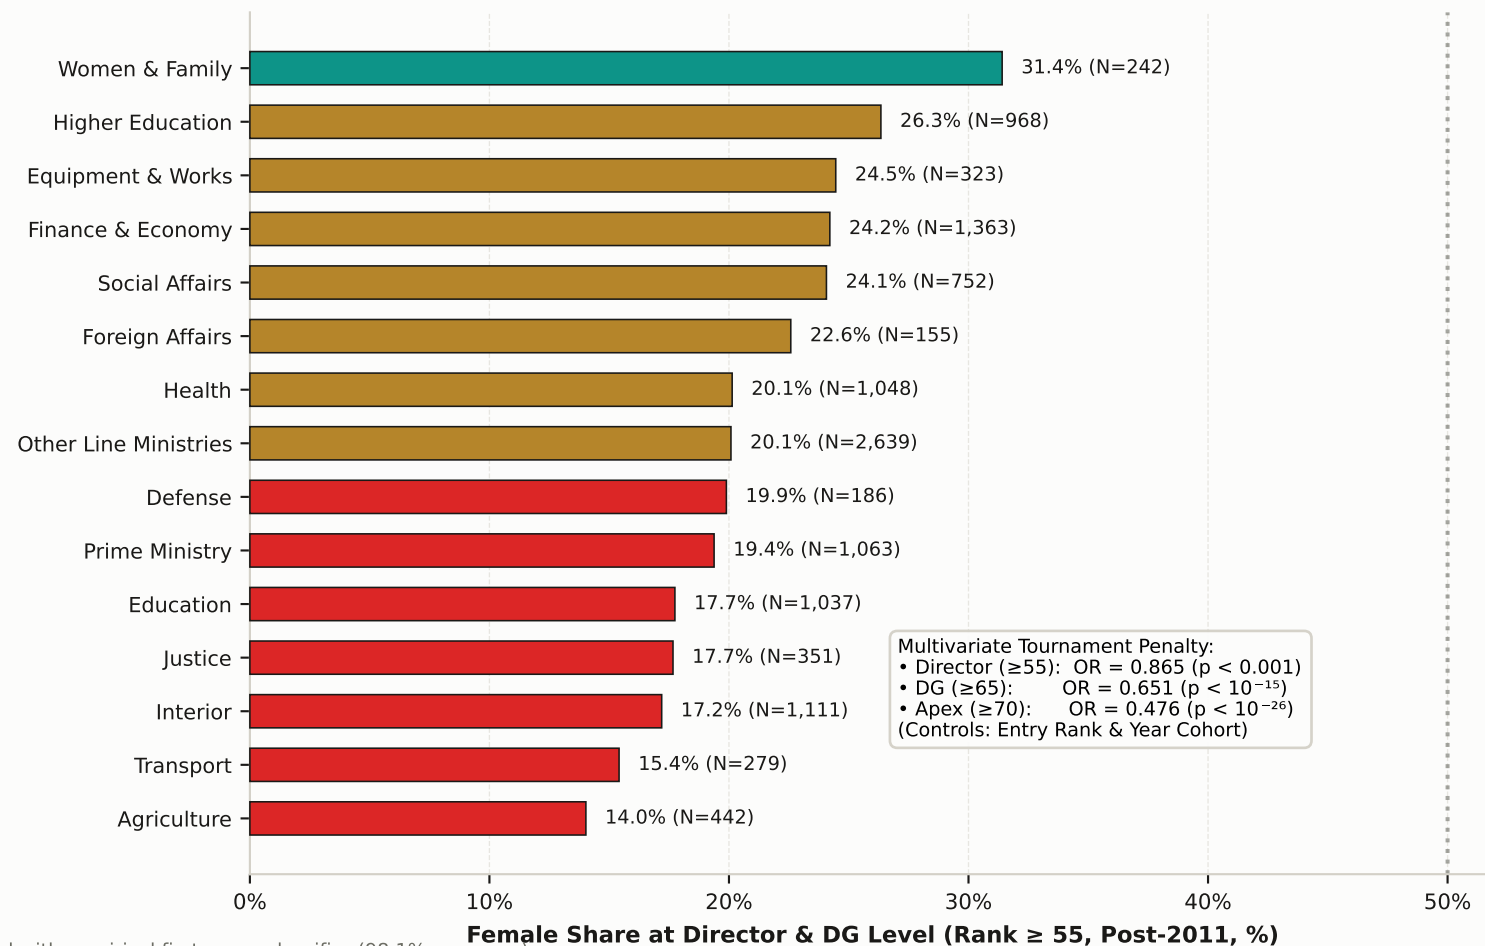

C. Career Tournament Promotion Curves (Rank ≤ 45 Entrants)

Male bureaucrats enjoy more than double the promotion probability to Director General

D. Sectoral Glass Ceilings at Senior Ranks (Rank ≥ 55, Post-2011)

High inclusion in Women's Affairs & Higher Ed; Interior, Transport & Agri remain ≤ 17%

Source: Journal Officiel de la République Tunisienne (1957-2026). Gender inferred from gazette honorifics (M./Mme) cross-referenced with empirical first-name classifier (98.1% coverage).
Tournament curves track entrants starting at administrative baseline ranks (Chef de service/Sous-directeur, Rank ≤ 45).
