

A marriage field assembling itself

Tunisian elite families and the marriages between them, as they accumulate. Every family sits in the same place in all six panels, so a node darkening or an edge appearing is a marriage and nothing else. A family is drawn once it has married outside its own surname; the pale ground is the families still to come. Node size and shade are marriages into other families by that date.

Source: rodovid.org genealogies, filtered and collapsed to families by the [rodovid build](https://rodovid.org/build), dated by [rodovid.dynamic](https://rodovid.org/dynamic). Marriages carry no date in the source: a couple is placed by the mean birth year of the two spouses, so a period is the generation the spouses belong to and the wedding follows roughly 25-30 years later. 85% of the alliances in the static network can be dated; see docs/LIMITATIONS-rodovid.md.
